One of the most common symptoms of a failed ignition relay is a car that suddenly stalls while operating. If the ignition relay shorts, burns out, or otherwise fails while the engine is operating it will cut off power to the fuel pump and ignition system. This will cause the vehicle to immediately stall due to fuel and spark being cut off.

Start the engine and carefully check for voltage at the compressor. If there's no voltage, check the fuses in the relay box under the hood and the relays. If there is power to the compressor clutch, then the compressor is bad. Check the gauges with the engine running and the AC on now that the system is charged and see if it is cold.
