Introduction This document describes the operation and configuration of BGP EVPN Services over a VXLAN (Virtual eXtensible LAN) overlay on Arista platforms. The focus in this design guide is VxLAN as the protocol for the data-plane encapsulation for the overlay tunnels, and the functionality of the Multiprotocol BGP (MP-BGP) EVPN address-family for control plane signaling in the overlay.

## **Arista EOS Central - Category - EVPN**

Description In the Centralized Anycast Gateway configuration, the Spines are

# Get Free Arista Configuration Guide

configured with EVPN-IRB and are used as the IP Default Gateway (DWG), whereas the Top of rack switches perform L2 EVPN Routing. EVPN-IRB supports both Virtual eXtensible Local Area Network (VXLAN) Bridging and IP Routing on the top of rack (TOR) switch.

Summary: CloudVision manages Arista Switch configurations through the use of Containers and Configlets. The Container layout is completely arbitrary and allows the customer flexibility and alignment to their organization's mode of operation. Containers are a hierarchical structure of Parent-Child relationships, similar to Active-Directory.
