Bmw M10 Engine

The BMW M10 is an SOHC four-cylinder petrol engine which was produced from 1962-1988. It was BMW's first four-cylinder engine since the BMW 309 ended production in 1936 and was introduced in the New Class sedans. Over 3.5 million M10 engines were produced during the M10's 26 year production run, and it was used in many BMW models.

BMW M10 - Wikipedia

The BMW M10 is a straight-4 SOHC piston engine produced from 1962 to 1988 with displacements ranging from 1499 cc to 1990 cc. It was first released in the New Class sedans and began to be phased out following the introduction of the M40 engine by 1987.

This checklist is what we recommend for those looking to rebuild their BMW 2002's M10 engine and want to get more "spice" out of it. This setup will run well on 91 octane fuel, and last a very long time if properly maintained. It is not a "race-car-for-the-street" build that will need replacing in less than twenty thousand miles.

BMW M10 - Street HotRod Engine Checklist

Led by Alex von Falkenhausen, chief of engine development and a noted BMW car and motorcycle racer, the M10 team soon engineered larger and more powerful variants. The 1800 sedan featured a 1.8-liter, 90hp version while the 1600's engine made 83hp. The 1966 model year saw the debut of a 100hp, 1,990cc variant in the 2000 sedan.

I think I can explain this one. First a caveat is that I am a Mechanical engineer with many years working in engine performance applications but not a mechanic or someone with extensive M10 experience. Basically I don't know squat about the specifics of the Schrick or BMW cam or how they interact with a M10 system. The 0.020" or 0.010" or 0.5mm ...
