Building to Suit the Climate by Birkhäuser - Issuu

INTRODUCTION Weather has a great impact on the structure and functionality of a building, it is of vital importance to choose building materials suitable for the weather. Climate plays a significant role in the life span, durability and environmental performance of construction materials.

Building material for different climate activity

In conjunction with insulation, materials such as building wrap (sisalation) and under-floor linings are used to seal drafts, preventing cold air from entering and warm heated air from escaping. Low energy glass or double glazing in windows is often used to increase the energy efficiency of the building.

Building to Suit the Climate by Birkhäuser - Issuu

Building flexibility into the process means that changing climate conditions can be taken into account (Major and O'Grady 2010). The design incorporates pathways for adaptation in the future, which can be taken as needed without too much additional expense. Examples of such 'flexible adaptation pathways' include:

Adapting to climate change | YourHome

Evacuees from Fort McMurray, Alta., drive past wildfires in May 2016. As climate change intensifies, experts say, fires, flooding and wind storms will become more common, and Canada's building ...

Canada's building code is getting a climate change rewrite ...

For Thomas Pellerin-Carlin from the think tank Jacques Delors Institute, this is a "good deal" for climate - but "the challenge will be to suit the action to the words [and] transform late-night promises into concrete projects that build a clean future: clean start-ups, housing renovation, bike lanes [or] sustainable agriculture".
