Cane Toads And Other Rogue

What does an unusually large, ugly, invasive species of toad have to do with global warming, international trade, and the survival of biodiversity? Quite a lot, actually. Mark Lewis's amazing and hilarious documentary Cane Toads tells the story of Bufo marinus, which was introduced to Australia in 1935 to control bugs but which quickly became a far greater menace than the beetles they eat.

Cane Toads: The Conquest | TakePart

Cane Toads: An Unnatural History (1988) is a 47-minute documentary film about the introduction of cane toads to Australia. Cane toads were introduced to Australia with the aim of controlling a sugar cane pest, the cane beetle, but they over-multiplied and became a serious problem in the Australian ecosystem.It is often humorous, and is used in high schools and colleges as a complement to ...

Cane Toads: An Unnatural History - Wikipedia

Predators of the can toad include spiders, crayfish, crocodiles, dingoes, snakes, quolls, birds and rats. To defend against predation the cane toad is equipped with poison which they can deliver through glands on the back of the neck as well as their skin. It can also be sprayed from the parotid gland at attackers.

Cane Toad | The Animal Facts Habitat, Diet, Appearance ...

Cane Toads can breed in most still or slow-flowing water, and tolerate salinity levels up to 15%. Male Cane Toads start calling for mates after the first summer storms (in Australia that is about September) or when water temperatures reach 25° C. The choruses peak in January and finish by March.
