According to classical physics, “reality” takes place in a product space  $R^3 \times R$ , where  $R^3$  represents space and  $R$  represents time. The notions of space and time are axiomatic in classical physics, meaning that they do not deserve a definition. (In relativistic physics, the notions of space and time are intermingled, and one

Growing networks of actin fibers are able to organize into compact, stiff two-dimensional structures inside lamellipodia of crawling cells. We put forward the hypothesis that the growing actin network is a critically self-organized system, in which long-range mechanical stresses arising from the interaction with the plasma membrane provide the selective pressure leading to organization.

The new ‘classical’ mechanics which includes kinematics according to special relativity, satisfactorily explains many observed phe-nomena, including the Michelson-Morley experiment that indicated that the speed of light as measured in an inertial frame does not depend on its state of motion.

The conventional Galton board illustrates diffusion in a classical-mechanics context: it is composed of balls performing a random walk on a downward sloping plane with a grid of pins. We introduce a wave-mechanical variety of the Galton board to study the influence of interference on the diffusion. This variety consists of a
