Excision of a sural nerve end neuroma and application of a ...

I started with the sural nerve. The cut end of the sural nerve was freshened. I utilized the tibialis anterior free muscle flap for creation of a regenerative peripheral nerve interface. The free muscle flap was approximately 3 cm in length by 1 cm wide x 0.5 cm thick. I utilized a 6-0 nylon suture to tack the tibialis anterior free muscle flap ...

Regenerative Peripheral Nerve Interface (RPNI)

This procedure is safe, is relatively easy to perform, and can provide excellent anesthesia to the foot and lower leg. [2, 3, 4] In one study, regional anesthesia of the foot and ankle, when performed by surgeons, was completely successful 95% of the time. [] Because the sural nerve is relatively superficial, it is easily blocked at multiple levels at or above the ankle.

Sural Nerve Block: Overview, Perioperative Care, Technique

A sural nerve block is a procedure for anesthetizing a part of the calf, lower leg, heel and foot. An anesthetic solution is injected adjacent to the Achilles tendon on the outer side of the foot. The anesthetic blocks the transmission of pain signals from injury or surgery in these parts of the lower leg.
