What makes up the endocrine system?  
The endocrine system is made up of glands that release their products into the bloodstream. 2.

## **Chapter 39 Endocrine and Reproductive Systems, TE**

The endocrine system controls the functioning of the reproductive system. The responsible endocrinal glands are known as the gonads. The gonads secrete sex hormones, which are responsible for sexual development, and the associated growth spurts in the body. They are also responsible for the development of secondary sexual characteristics.

## **The Endocrine system and Reproduction. 8th Grade Science ...**

The nervous system can respond expeditiously to stimuli, through the utilization of action potentials and neurotransmitters. Replications to nervous system stimulation are typically expeditious but ephemeral. The endocrine system responds to stimulation by secreting hormones into the circulatory system that peregrinate to the target tissue.

## **Phlebotomy-Reproduction And Endocrine System Questions and ...**

Endocrine hormones are released by the thyroid, parathyroid, adrenal and other glands, guided by the pituitary gland. Hormones are involved in nearly all biological processes: immune function, reproduction, growth, and control of other hormones. Endocrine hormones signal molecules in a fashion similar to the nervous system.
