Pythagoras: A Life Beyond Math and Science | Ancient Origins

The Pythagorean

Theorem is a

statement in geometry

that shows the

relationship between

the lengths of the sides

of a right triangle - a

triangle with one

90-degree angle. The

right triangle equation

is $a^2 + b^2 = c^2$.

Being able to find the

length of a side, given

the lengths of the two

other sides makes the

Pythagorean Theorem

a useful technique for

construction and

navigation.

insisted that he never ate any living thing.

After getting caught eating dog meat, the Pythagorean said,

The triple 3 - 4 - 5 is really a ratio 3:4:5, since any multiple of 3 - 4 - 5 will also be a Pythagorean Triple. In fact all right triangles formed by the triple 3 - 4 - 5 will be similar. There is an infinite number of these Pythagorean Triples. 5:12:13 is another example. 6. Example of squares on sides of right triangle:
