### **Mechanism Of Circular Loom - coinify.digix.io**

Mechanism (Weft insertion) of circular multiphase loom: Beat-up is achieved by a spiked wheel mounted on an antenna trailing behind the shuttle. The spikes pick up the trailing weft and finally press it into the cloth fell. The work of the temple is done by a fixed ring, which prevents early contraction of the cloth. The take up motion is mounted in a high position and the loom thus require a lofty room or space on two floors, one above the other.

Mechanism (Weft insertion) of circular multiphase loom: □ Beat-up is achieved by a spiked wheel mounted on an antenna trailing behind the shuttle. □ The spikes pick up the trailing weft and finally press it into the cloth fell. □ The work of the temple is done by a fixed ring, which prevents early contraction of the cloth. □ The take up motion is mounted in a high position and the loom thus require a lofty room or space on two floors, one above the other.

### **Multiphase Circular Loom - SlideShare**

The basic mechanisms in any type of looms can be classified into Primary (shedding, picking & beat up), secondary and Auxiliary motions. Shedding opens the warp sheet into layers. The picking causes the shuttle carrying weft to be propelled from one end of the loom to another. The beat-up motion lays the previously laid weft to the fell of the cloth.

### **WEAVING MACHINES (LOOMS) - QQM**

Textile - Textile - Modern looms: Modern looms still weave by repeating in sequence the operations of shedding, picking, and beating in, but within that framework there has been considerable development during the 20th century. Several new types of loom have come into industrial use, whereas older types have been refined and their scope extended. Two main influences have been the rising cost ...

### **Mechanism Of Circular Loom - shop.gmart.co.za**

A mechanism for guiding a shuttle in a circular loom having shuttles provided with a plurality of rotatable supporting wheels moved along a circular running passage. Wefts taken out from each...

### **US5056567A - Mechanism for guiding shuttles in a circular ...**

The rigid rapier is a metal or composite bar usually with a circular cross section. The rapier enters the shed from one side, picks up the tip of the filling yarn on the other side and passes it across the loom width while retracting. Therefore, a single rapier carries the yarn in one way only and half of the rapier movement is wasted.
