

Real Analysis Exam Solutions

Yeah, reviewing a book **real analysis exam solutions** could increase your close friends listings. This is just one of the solutions for you to be successful. As understood, triumph does not recommend that you have fabulous points.

Comprehending as with ease as conformity even more than extra will allow each success. adjacent to, the message as skillfully as acuteness of this real analysis exam solutions can be taken as capably as picked to act.

FeedBooks: Select the Free Public Domain Books or Free Original Books categories to find free ebooks you can download in genres like drama, humorous, occult and supernatural, romance, action and adventure, short stories, and more. Bookyards: There are thousands upon thousands of free ebooks here.

Real Analysis Exam Solutions

MATH 4310 Intro to Real Analysis Practice Final Exam Solutions

1. Find the limits of the following sequences. (a) $s_n = nx^{1+n}$; $x > 0$ Solution: $s_n \rightarrow 0$ since $|nx^{1+n}| \leq n|x|^{1+n} \rightarrow 0$. (b) $s_n = n(1 - \cos(x/n))$; $x > 0$ Solution: By Taylor remainder thm (Theorem 2.5.4), $\cos(x/n) = 1 - \frac{1}{2}(x/n)^2 + \sin(c/n)(x/n)^3 = 1 - \frac{x^2}{2n^2} + \sin(c/n)(x/n)^3$, for some $c \in (0, x/n)$. Thus, $s_n = n(1 - \cos(x/n)) = \frac{x^2}{2n} - \sin(c/n)x^3 = \frac{x^2}{2} - \frac{x^3 \sin(c/n)}{n}$.

MATH 4310 Intro to Real Analysis

Math 312, Intro. to Real Analysis: Final Exam: Solutions Stephen G. Simpson Friday, May 8, 2009 1. True or false (3 points each).

(a) For all sequences of real numbers (s_n) we have $\liminf s_n \leq \limsup s_n$. True.

Math 312, Intro. to Real Analysis: Final Exam: Solutions

XExclude words from your search. Put - in front of a word you want to leave out. For example, jaguar speed -car. Search for an exact match. Put a word or phrase inside quotes. For example, "tallest building". Search for wildcards or unknown words. Put a * in your word or phrase where you want to leave a placeholder.

Math 312, Intro. to Real Analysis: Midterm Exam #1 Solutions
Stephen G. Simpson Friday, February 13, 2009 1. True or False (3 points each) (a) Every ordered field has the Archimedean property.

Math 312, Intro. to Real Analysis: Midterm Exam #1 Solutions

Solution: This is known as Bernoulli's inequality. Let $a \in \mathbb{R}$ with $a > -1$. We proceed by induction. For $n=0$, $(1+a)^0 = 1 = 1 + (0)a$ which is trivially true. Assume that the inequality is true for some $k \geq 0$. Then $(1+a)^k \geq 1 + ka$. Consider the case of $k+1$. Since $a > -1$, then $1+a > 0$. By assumption, $(1+a)^k \geq 1 + ka$. Hence, $(1+a)^{k+1} = (1+a)(1+a)^k \geq (1+a)(1+ka)$.

Math 4317 : Real Analysis I Mid-Term Exam 1 25 September 2012

4. (a) Suppose $f_n: A \rightarrow \mathbb{R}$ is uniformly continuous on A for every $n \in \mathbb{N}$ and $f_n \rightarrow f$ uniformly on A . Prove that f is uniformly continuous on A . (b) Does the result in (a) remain true if $f_n \rightarrow f$ pointwise instead of uniformly? Solution. • (a) Let $\epsilon > 0$. Since $f_n \rightarrow f$ converges uniformly on A there exists $N \in \mathbb{N}$ such that $|f_n(x) - f(x)| < \epsilon/3$ for all $x \in A$ and $n > N$.

Real Analysis Math 125A, Fall 2012 Sample Final Questions

FINAL EXAMINATION SOLUTIONS, MAS311 REAL ANALYSIS I 3 (ii) Show that $s_n \leq 2$ for all n . (Hint: Use induction again.) (5 marks) Proof. Once again, the case for $n = 1$ is easily true as $s_1 = \sqrt{2} \leq 2$. Assuming the contention hold for $n = k - 1$, then $s_k = \sqrt{2 + \sqrt{s_{k-1}}} \leq \sqrt{2 + 2} = 2$, where the inequality above follows from the induction hypothesis.

FINAL EXAMINATION SOLUTIONS, MAS311 REAL ANALYSIS I ...

Solution: (a): Since x^{2n} tends to $+\infty$ when $|x| > 1$ and converges to 0 when $|x| < 1$ we obtain the pointwise limit $F(x) = 0$ if $|x| > 1$ $1/2$ if $|x| = 1$ 1 if $|x| < 1$ (b): Any compact subset A of $(-1,1)$ is contained in a closed interval $[-a,a]$, for some $a \in [0,1)$.

Ph.D. QUALIFYING EXAM IN REAL ANALYSIS

Math 4317 : Real Analysis I Mid-Term Exam 2 1 November 2012

Name: Instructions: Answer all of the problems. Definitions (1 point each) 1. For a sequence of real numbers f_n , state the definition of $\limsup f_n$ and $\liminf f_n$. Solution: Let $u_N = \sup_{n \geq N} f_n$ and $l_N = \inf_{n \geq N} f_n$. Then $\limsup f_n = \lim_{N \rightarrow \infty} u_N$ and $\liminf f_n = \lim_{N \rightarrow \infty} l_N$.

Real Analysis Exams | Department of Mathematics

Part A: real analysis (Lebesgue measure theory) Part B: complex analysis; Part C: applied analysis (functional analysis with applications to linear differential equations) Each part will contain four questions, and correct answers to two of these four will ensure a pass on that part. To pass the Analysis exam, you must either pass Part A and Part B, or Part A and Part C.
