Mechanisms describes the integral process of developing cost-effective, reliable structures and mechanical products for space programs. Processes are defined, methods are described and examples are given. It has been written by 24 engineers in the space industry, who cover the themes of (1) ensuring a successful mission, and (2) reducing

The dynamics of the spacecraft structures is of fundamental importance to guarantee the appropriate performance, and similarly the implementation of mechanisms to enable specific functions, ranging from attitude control to deployment of various elements and it is interlinked with the spacecraft structural design.
