The world population has experienced continuous growth following the Great Famine of 1315–1317 and the end of the Black Death in 1350, when it was near 370 million. The highest global population growth rates, with increases of over 1.8% per year, occurred between 1955 and 1975—peaking to 2.1% between 1965 and 1970.

World population - Wikipedia

From 1950 to current year: elaboration of data by United Nations, Department of Economic and Social Affairs, Population Division. World Population Prospects: The 2019 Revision. (Medium-fertility variant).

World Population Projections - Worldometer

The probability that the world's population growth would end by 2100 remains virtually constant in all three cases with differences only visible around the middle of the century (see Figure 5). Table 2 gives the median world population size and the 80 percent prediction intervals for the years 2000, 2025, 2050, 2075, and 2100.

The End of World Population Growth

At the other end of the spectrum, 2.37 billion people -- more than a quarter of the global population -- will be over 65 years old by then. Those over 80 will balloon from about 140 million today to 866 million. Sharp declines in the number and proportion of the working-age population will also pose huge challenges in many countries.

The world's population by the end of this century could be ...

According to current projections, the population of Kenya will surpass 100 million people by the end of 2058 and will reach 125 million by the end of the century. Kenya's annual population growth rate is 2.28% per year. The population growth rate was as high as 3.94% in 1981 and 1982 but has since
