Round your answer to two decimal places.

Solution to Question 2:

$\sin(2x)$ may be calculated using the double angle trigonometric identity.
 $\sin(2x) = 2 \sin(x) \cos(x)$
 $\cos x$ is given, we need to find $\sin x$ using the identity $\sin^2 x + \cos^2 x = 1$ and noting that x is in quadrant 3 where $\sin x$ is negative.

trigonometric identities, which we learn in trigonometry chapter. They are: $\cos^2 \theta + \sin^2 \theta = 1$; $1 + \tan^2 \theta = \sec^2 \theta$; $1 + \cot^2 \theta = \operatorname{cosec}^2 \theta$;
Here, we will prove on trigonometric identity and will use it to prove the other two.

Class 11 Maths

Chapter 3

Trigonometric ...

Trigonometric

identities are equalities

involving trigonometric

functions. An example

of a trigonometric

identity is $\sin^2 \theta$

+ $\cos^2 \theta = 1$.

$\sin^2 \theta + \cos^2 \theta = 1$. In

order to prove

trigonometric

identities, we generally

use other known

identities such as

Pythagorean identities.
