And if you're gonna deal with more than one dimension, especially in two dimensions, we're also gonna be dealing with two-dimensional vectors. And I just wanna make sure, through this video, that we understand at least the basics of two-dimensional vectors. Remember, a vector is something that has both magnitude and direction.

Vectors can also be used in in a two-dimensional plane or a three-dimensional space. A two or three dimensional world can be represented with more than one axis. Each axis is a number line, and is at right angles to the others. In two dimensions, the horizontal axis is labeled the x axis, and the vertical axis is labeled the y axis.
