The Unified Modeling Language (UML) is a general-purpose, developmental, modeling language in the field of software engineering that is intended to provide a standard way to visualize the design of a system.. The creation of UML was originally motivated by the desire to standardize the disparate notational systems and approaches to software design.

Unified Modeling Language - Wikipedia

The two most widely used notations are Unified Modeling Language (UML) and Business Process Model Notation (BPMN). With the introduction of BPMN, UML is being used more for systems modeling and BPMN has surpassed it as the best practice for business process modeling. However you can still use UML quite comfortably to model business processes.

Why Model Business Processes?

UML, short for Unified Modeling Language, is a standardized modeling language consisting of an integrated set of diagrams, developed to help system and software developers for specifying, visualizing, constructing, and documenting the artifacts of software systems, as well as for business modeling and other non-software systems.
